

ABSTRACT

The present invention provides a hot dip galvanized composite high strength steel sheet excellent in shapeability and hole enlargement ability and a method of production of the same, that is, a hot dip galvanized composite high strength steel sheet excellent in shapeability and hole enlargement ability containing C: 5 0.01 to 0.3%, Si: 0.005 to 0.6%, Mn: 0.1 to 3.3%, P: 0.001 to 0.06%, S: 0.001 to 0.01%, Al: 0.01 to 1.8%, and 10 N: 0.0005 to 0.01% and having a metal structure of ferrite and, by area rate, 5% to 60% of tempered martensite and a method of production of the same comprising hot rolling, then cold rolling a slab 15 including the above ingredients, heating the sheet in the hot dip galvanization heating process to Ac_1 to $Ac_3+100^\circ C$, holding it there for 30 seconds to 30 minutes, then cooling it by a $1^\circ C/s$ or higher cooling rate to 450 to 600 $^\circ C$, hot dip galvanizing it at that temperature, then 20 cooling it at a $1^\circ C/s$ or higher cooling rate to the martensite transformation point or lower in temperature, holding it there at 200 $^\circ C$ to 500 $^\circ C$ for 1 second to 5 minutes, then cooling it at a $5^\circ C/s$ or higher cooling rate to 100 $^\circ C$ or less.
